

## Air emissions regulations have become more complex. But compliance is now easier than ever.

Title V of the 1990 Clean Air Act Amendments places significant new documentation burdens on facilities and environmental managers. It's no longer enough to simply track responses to emissions deviations. Now Title V permits require facilities to report their deviations, to record their responses to these deviations, and to actively certify compliance on a regular basis.

These demands can significantly increase the cost, complexity and potential for errors within your air compliance program – which is why more organizations than ever are choosing the Enviance System for compliance management.

### Enviance makes Title V certification simpler

Only the Enviance System provides all the tools and flexibility you need to meet all your Title V obligations efficiently, confidently and across the entire documentation process.

- ▶ Compliance certification reporting
- ▶ Semi-annual monitoring reports of deviations
- ▶ Short-term deviation reporting requirements
- ▶ Plant-wide emissions limits documentation and reporting

### Manage potential deviations your way

Many facilities experience hundreds of potential deviations each year, each of which must be evaluated on a timely basis and addressed and reported if required.

The Enviance System is customized to mirror your workflow processes, allowing for the right balance of efficient automation and human discretion. You decide which events require reporting, and the System issues, escalates and tracks to completion all required tasks related to a deviation. Detailed explanations of each potential deviation can even be stored within the System, for fast reference to each compliance decision.

### MANAGE ALL YOUR AIR PROGRAMS AND OBLIGATIONS WITH THE ENVIANCE SYSTEM:

- \* Title V
- \* MACT
- \* NSPS
- \* Emissions inventory
- \* Toxics reporting
- \* Enforcement response tracking

### Fast, accurate reporting

Your Enviance System's report capabilities are fully customized to each facility's obligations. Your users easily tailor monitored parameters to your state and local standards, ensuring data consistency from entry to final report. And with our exclusive Report Writer technology, Title V reports are complete with just a few keystrokes, pulling data directly from your system and in the precise format you require.

### Simplified record keeping

Title V requires facilities to keep data for five to seven years. The Enviance System keeps your historical data accessible and provides for consistent organizational memory.

- ▶ Store and track an unlimited number of permit conditions and regulatory citations
- ▶ Track all pollutant emission limits by source and equipment
- ▶ Compare emissions and operating parameters against defined limits
- ▶ Document required inspections and operating standards

### POWERFUL BENEFITS:

- ▶ Confidently submit all Title V reports
- ▶ Reduce the potential for penalties
- ▶ Significantly reduce the time and resources required for reporting and audit response
- ▶ Automate the process of identifying, managing and reporting Title V deviations, while facilitating user decision-making

### Save time and resources

The Internet-based model and unrivaled functionality of the Enviance System reduce costs and complexity at every step – from collecting and collating data to report generation.

- ▶ Managers easily stay current with all air compliance activities – including compliance status and reporting obligations – anytime, anywhere over the Internet
- ▶ From notification of potential deviations to task holder alerts and reminders – all these steps are fast and automated
- ▶ Data calculations and comparisons are standardized and consolidated in one system
- ▶ Accurate reports are generated in minutes

### Why take risks when you can take control?

There's simply no more powerful tool for meeting your Title V obligations – and managing all your health, safety, air, water and waste compliance programs – than the Enviance System.
